

DIGITAL LITERACY PROJECT REPORT

Name: R ESWAR

Reg No: 25BOE10045

Branch: B.Tech Bioengineering

Year: First Year

Course Code: CSE0001

Date: 31 March 2026

Introduction

This project focuses on developing essential digital literacy skills required for students in today's technology-driven world. As a Student Digital Ambassador, the objective of this assignment is to guide peers in understanding digital tools, professional communication, and online safety practices. The project involves multiple tasks that enhance awareness about responsible digital behavior and effective use of online platforms. In particular, Tasks 4 and 5 emphasize the importance of professional email communication and cybercrime awareness. These tasks help build practical skills such as writing formal emails, maintaining proper online etiquette, and understanding common cyber threats. Overall, this project aims to prepare students to use digital resources responsibly and efficiently in both academic and professional environments

Task 1

In this task, I created a Digital Literacy Awareness Infographic to help students understand the importance of digital literacy. I used Canva as the design tool because it is easy to use and provides a variety of templates and visual elements. My infographic included key topics such as the meaning of digital literacy, safe internet practices, and maintaining a professional online presence. I used icons, headings, and short points to make the content visually appealing and easy to understand.

While creating the infographic, I found it interesting to organize information in a concise and visually engaging way. The main challenge I faced was selecting the most important points and presenting them clearly within limited space. This task helped me understand how visual communication can be more effective than plain text. It also improved my creativity and ability to present information in a structured and attractive format, which is useful for academic and professional purposes.

Task 2

In this task, I built my student digital portfolio by creating profiles on platforms such as GitHub, LinkedIn, and HackerRank. GitHub is used for sharing coding projects and collaborating with others, while LinkedIn helps in building a professional network and showcasing academic achievements. HackerRank is useful for practicing coding skills and improving problem-solving abilities.

I updated my GitHub profile with basic details like my name, branch, and a short introduction about my learning goals. On LinkedIn, I added my education details, including my degree and institution. Creating these profiles helped me understand the importance of maintaining a professional online presence.

Over the next four years, I plan to use GitHub to upload my projects, LinkedIn to connect with professionals and explore opportunities, and HackerRank to improve my coding skills. This task helped me realize that having a strong digital presence is essential for career growth and future opportunities.

Task 3

In this task, I explored coding and collaboration platforms. For the coding practice part, I used HackerRank and completed a beginner-level challenge. This helped me understand basic problem-solving techniques and how coding platforms work. It also improved my confidence in writing simple programs.

For the collaboration part, I created a Google Form as a Digital Literacy Awareness Quiz with five questions. The form included both multiple-choice and short-answer questions. I also viewed the responses in Google Sheets, which helped me understand how data is collected and analyzed.

This task showed me how online tools can support both learning and collaboration. Coding platforms help improve technical skills, while tools like Google Forms make it easy to collect and organize information. These tools will be very helpful in my academic journey for assignments, surveys, and teamwork activities.

Task 4

In this task, I learned how to communicate professionally through email and follow proper digital etiquette. I created two formal emails: one requesting an extension for an assignment and another expressing interest in a summer internship opportunity. This activity helped me understand the importance of using clear subject lines, polite greetings, structured content, and appropriate sign-offs. Additionally, I developed a Social Media Do's and Don'ts checklist, which highlights responsible online behavior such as maintaining professionalism and protecting personal information. I also analyzed a scenario where poor communication caused confusion due to unclear messaging and lack of proper format. This task showed me that effective communication is essential in academic and professional settings, and using the correct tone and structure can prevent misunderstandings.

Task 5

This task helped me gain awareness about cybercrime, particularly phishing attacks. I learned how cybercriminals use fake emails and websites to trick users into revealing sensitive information such as passwords and banking details. What surprised me most was how realistic these phishing attempts can be, making them difficult to identify.

This made me realize the importance of being cautious while interacting online. As a result, I will adopt safer habits such as verifying links before clicking, avoiding sharing personal information, and using strong passwords. I also learned about reporting cybercrime through the National Cyber Crime Portal and helpline 1930. This task has made me more aware and responsible while using digital platforms.

Conclusion

Overall, this project enhanced my understanding of digital literacy, professional communication, and cyber safety. It helped me develop practical skills such as writing formal emails and identifying online threats. These learnings will be useful in my academic journey and future career. The project also encouraged me to adopt responsible digital habits and spread awareness among my peers.
