

DIGITAL LITERACY PROJECT – TASK 2

Task 2: Build Your Student Digital Portfolio

In this task, I built my student digital portfolio by creating profiles on platforms such as GitHub, LinkedIn, and HackerRank. GitHub is mainly used for sharing coding projects and collaborating with others, while LinkedIn is used to build a professional network and showcase academic achievements. HackerRank helps in improving coding and problem-solving skills through practice exercises.

I created and updated my GitHub profile by adding my name, branch, and a short description about my learning goals. On LinkedIn, I filled in my education details, including my degree, institution, and expected graduation year. These steps helped me understand how to maintain a professional online presence.

Over the next four years, I plan to regularly update my GitHub with projects, use LinkedIn to connect with professionals and explore internship opportunities, and practice coding consistently on HackerRank. This task helped me realize the importance of building a strong digital identity for future academic and career growth.
